 Ahmed Saadi

Profile

Experienced software engineer specialized in back-end development, with strong expertise in designing and maintaining scalable, secure, and high-performance applications. Proficient in databases, APIs, and server-side technologies, with hands-on experience in deploying and configuring software solutions on production environments. Skilled at collaborating with cross-functional teams to deliver reliable systems on time.

Professional Experience

Mar 2026 – Present Remotely	Back-End Developer Innovators - Developed and maintained custom web applications and client websites using Laravel, delivering scalable, secure, and high-performance solutions. - Collaborated with clients and cross-functional teams to analyze requirements and deliver scalable software solutions. - Built RESTful APIs and integrated third-party services, including payment gateways, SMS, email, and external APIs. - Optimized application performance, resolved production issues, and contributed to deployments and ongoing system improvements.
Dec 2025 – Jun 2026 Remotely	Full Stack Developer TaxiF - Developed and maintained public websites, CMS platforms, and internal business systems tailored to operational and business needs. - Built and enhanced enterprise solutions, including ERP modules, monitoring systems, operational dashboards, and other internal tools. - Collaborated with stakeholders to translate business requirements into scalable technical solutions and deliver high-quality features. - Developed RESTful APIs and integrated third-party services while ensuring performance, security, and maintainability. - Leveraged AI-assisted development tools to improve productivity, accelerate implementation, and support debugging while maintaining engineering best practices. - Worked primarily with Laravel for back-end development, contributing to front-end implementation, deployments, and production support.
Jun 2024 – Oct 2025 Damascus, Syria	Full-Stack Developer Nobalaa Co - Built and launched full-stack websites from scratch, delivering high-performance, secure, and responsive user experiences. - Improved and modernized existing platforms by adding new features and optimizing performance, resulting in smoother workflows and better user engagement. - Developed and integrated APIs to connect third-party services, ensuring reliability and scalability through thorough testing. - Managed hosting, servers, and deployments, guaranteeing stable and efficient production environments. - Optimized databases for performance, security, and scalability.

- Specialized in Laravel for back-end development, while contributing to front-end tasks with modern web technologies.

Apr 2021 – Present
Damascus, Syria

Back-End Developer

Freelance

- Delivered customized software solutions aligned with client business objectives, ensuring scalability, performance, and long-term value.
- Specialized in back-end development, database optimization, and API integration, with a focus on secure and reliable systems.
- Collaborated directly with clients to gather requirements, recommend best practices, and translate technical needs into clear, actionable deliverables.

Education

Sep 2018 – Jul 2024
Jabab, Daraa
Governorate, Syria

Bachelor's Degree in Software Engineering

Private Yarmouk University

Languages

Arabic, English

Technical Skills Summary

Programming Languages: PHP, JavaScript

Frameworks & Libraries: Laravel, Node.js, CodeIgniter

Databases: MySQL, SQL Server, Firebase

Tools & Technologies: Git, RESTful APIs, VPS, Shared Hosting, Firebase Cloud Messaging

Front-End: HTML, CSS

Core Strengths: Server Management, Deployment, API Integration, Performance Optimization, Background Queues

Projects

Enterprise Content Management System (CMS)

- Designed and developed a comprehensive CMS platform that enabled administrators to manage website content through a centralized dashboard.
- Built flexible modules for managing pages, articles, blogs, menus, media assets, SEO metadata, navigation, and other website content without requiring code changes.
- Implemented role-based access control, allowing different user roles to manage content securely and efficiently.
- Developed reusable components and dynamic content management features to support multiple websites and business requirements.
- Integrated file and media management, ensuring efficient organization and delivery of images, documents, and other digital assets.
- Optimized the platform for performance, scalability, and maintainability while providing a user-friendly administration experience.

Employee Monitoring & Remote Desktop Platform

- Contributed to the development of an enterprise employee monitoring platform for Windows-based remote desktop environments, built with a .NET agent, a Go back-end, and a Next.js management dashboard.
- Developed features for activity monitoring, including user idle detection, keyboard and mouse activity, browser usage, clipboard monitoring, file transfer tracking, screenshots, video recording, and audio capture.

- Built configurable monitoring policies, allowing administrators to customize recording intervals, media quality, notification rules, and system behavior from a centralized dashboard.
- Implemented real-time monitoring capabilities with live session viewing, instant idle alerts, and centralized event collection to improve operational visibility.
- Collaborated on the project using AI-assisted development tools to accelerate implementation, prototyping, debugging, and feature delivery while maintaining engineering standards and code quality.

E-commerce Marketplace Platform

- Developed a full e-commerce platform enabling product buying and selling through individual online stores, delivered as both web and mobile applications.
- Built role-based dashboards for super admin and store managers to streamline operations and oversight, while designing a seamless storefront experience for customers.
- Implemented a personalized recommendation system that increased product discoverability and enhanced user engagement.
- Designed and developed front-end components, back-end services, and REST APIs to support seamless mobile integration.
- Ensured consistent user experience and reliable performance across all platform components.

Car Marketplace Platform

- Designed and developed a full-featured web application with role-based dashboards for admins, supervisors, and sellers, along with a seamless storefront experience for buyers, backed by a scalable back-end infrastructure.
- Implemented secure access control and seamless web–mobile integration through robust RESTful APIs.
- Integrated real-time chat functionality and configured Firebase Cloud Messaging to support instant communication and notifications.
- Integrated a Flask-based AI check to validate whether uploaded images/videos contain cars.
- Optimized task processing by integrating background queues, ensuring smooth and efficient operations.
- Deployed the platform on a shared hosting environment, delivering stable and accessible services to end users.

School Management Platform

- Built role-based dashboards for admins, supervisors, and advisors with fine-grained permissions per grade/class/section.
- Managed core entities: subjects, classes, parents, students; plus homework/assignments, notes, transportation, and financial records.
- Handled academic workflows: grades, activities, worksheets, weekly timetables, and exam schedules.
- Exposed RESTful APIs for the parents mobile app, enabling access to students activities, warnings, grades, and updates.
- Integrated WhatsApp messaging, allowing supervisors to send homework, schedules, and announcements to students via their personal WhatsApp accounts.
- Implemented push notifications for parents using Firebase Cloud Messaging (FCM).
- Used background queues to improve throughput and responsiveness under load.

Legacy CodeIgniter Application Upgrade

- Upgraded an outdated CodeIgniter web application to the latest stable version, resolving legacy issues and ensuring compatibility with modern PHP standards.
- Refactored and optimized the codebase for maintainability, security, and performance.
- Integrated Twilio SMS and WhatsApp Business, enabling account-linked WhatsApp messages directly from the platform.
- Deployed the upgraded application to a VPS environment, configuring the server for optimal performance and high availability.
